VITAMIN D

FOR HEALTH AND WELLNESS

Vitamin D is a fat-soluble vitamin with many positive health effects. Vitamin D has long been known to be vital for bone health. Growing evidence shows that lack of vitamin D is linked to many diseases such as Type 1 diabetes, periodontal disease, cardiovascular diseases, autoimmune diseases, cancer, osteoarthritis, poor response to infection, and multiple sclerosis.¹

Everyone needs vitamin D but some need it more crucially such as children below 3 years of age, adolescents and young adults, pregnant and breast-feeding women, people at risk of osteoporosis, elderly, dark skinned people, people who work indoors, use sun screen or covering clothes, and vegans.

Minisun is an easy way to ensure the daily intake of vitamin D. Minisun chewable tablets were developed in Finland and have become a popular choice for children and adults alike because of the simple dosage. Minisun contains effective vitamin D₃ (cholecalciferol) that raises the blood concentration of vitamin D to a healthy level and maintains it. The small and good-tasting Minisun tablet is easy to chew, suck on, or swallow.
